

Evacuated Tube Solar Water Heater

This solar water heater can be operated automatically when connected to an intelligent controller. Its simple structure allows easy plug-in installation on both flat and inclined roofs, and it can be used with an auxiliary electric booster.

Product Overview

Sustainable Water Heating Solution

This evacuated tube solar water heater provides an efficient, environmentally friendly alternative to traditional water heating methods. Designed for versatility, the system features a durable, insulated storage tank and is compatible with both flat and inclined roof installations. It offers stable performance with excellent wind resistance, making it suitable for residential, holiday, and camping applications.

Technical Specifications

Insulation Thickness	65 mm
Inner Tank Material	SUS304-2B Stainless Steel
Sealing Material	Silicagel

Features & Compatibility

Installation Compatibility	Flat Roof, Inclined Roof
Automatic Operation	Yes
Auxiliary Heating Support	Yes

Application

Ideal For

- Residential Homes
- Holiday Residences
- Camping Areas
