

# Evaporative Air Cooler for Industrial and Commercial Use

This evaporative air cooler is designed for use in factories, schools, and supermarkets. It reduces air temperature through water evaporation, offering an energy-efficient cooling solution for large spaces.

## ADDITIONAL IMAGES

## Overview

### High-Efficiency Evaporative Cooling

The KT30 series evaporative air cooler is engineered for large-scale industrial and commercial applications, including factories, schools, and supermarkets. By utilizing advanced evaporative cooling technology, this unit significantly reduces air temperature while maintaining superior energy efficiency compared to traditional air conditioning systems. Its robust design ensures long-lasting performance, while adjustable fan speeds and cooling levels provide customizable comfort for diverse environmental conditions.

## Key Features

### Core Benefits

Energy Efficient, Environmentally Friendly, Low Water Consumption, Robust Construction, Easy Maintenance

## Technical Specifications

### Cooling Performance

**30 KT**

Series Designation

### Design Features

- High-efficiency cooling pad
- Powerful axial fan for optimal airflow
- Large capacity water tank
- Adjustable fan speeds and cooling levels
- Accessible components for cleaning and servicing

## Compliance & Standards

### Certifications

ISO 9001:2000

## Applications

### Suitable Environments

- Factories
- Schools
- Supermarkets
- Large Indoor Spaces
