

Examination Management System

This examination management system employs a C/S architecture for fast operation and high security. It is designed for exam administration, especially for organizations that need bank management, paper management, and distribution functions.

System Overview

Comprehensive Examination Management

This management system provides a robust framework for handling examination-related processes, including student, teacher, and examination center administration. It features a sophisticated question bank module that supports manual entry, bulk Excel imports, and rich media attachments such as graphics. The platform is designed for professional use, offering advanced statistical analysis, examination monitoring, and multi-criteria query capabilities to ensure efficient academic workflows.

Question Bank Management

Data Hierarchy

- Subject Management
- Chapter Organization
- Knowledge Point Categorization

Supported Operations

Bulk Excel Import, Rich Media Support, Statistical Reporting, Multi-criteria Query, Real-time Updates

System Administration

Core Functional Modules

Module	Primary Function
Exam Management	Centralized scheduling and monitoring
Question Bank	CRUD operations and Excel integration
Statistical Analysis	Real-time data visualization and status tracking
Teacher/Candidate Management	User data and certificate administration
