

Excavating Loader with Rotating Arm

This excavating loader features a 360-degree rotating articulated digging arm with standardized joystick control. The loader has twice the ground speed of a normal excavator and a short transport length.

Overview

Innovative Multi-Functional Design

This new concept excavating loader offers a highly versatile solution for construction and material handling tasks. Featuring a 360° rotating articulated digging arm and a matching rotating loader, it provides exceptional flexibility on the job site. Designed for efficiency, the machine boasts twice the groundspeed of a standard excavator and a compact transport length.

Key Features

Operational Capabilities

- 360° rotating articulated digging arm
- 360° rotating loader/tool carrier
- Offset swing for both excavator and loader
- Standardized joystick control pattern
- Short tail swing design
- Excellent visibility to the excavator attachment
