

Excavator Bucket Lip Protectors

These lip protectors enhance production efficiency due to their high wear resistance. They offer high fatigue resistance, reliability, and are hard and tough.

Product Overview

Heavy-Duty Wear Protection

These high-performance lip protectors, also known as half arrows and lip segments, are engineered to safeguard the leading edges of heavy machinery buckets. Designed for demanding mining, quarrying, and construction environments, they effectively absorb high-impact forces and abrasive wear. By utilizing these protective components, operators can significantly extend the operational lifespan of their ground-engaging tools and reduce maintenance downtime.

Compatibility & Application

Compatible Equipment

Excavators, Backhoes, Front Shovels, Electric Shovels, Loaders, Bulldozers, Motor Grader Rippers

Product Features

Construction

High-strength alloy • Hardened steel • Abrasion-resistant • Impact-resistant

Design Features

- Stepped profile for enhanced edge protection
- Recessed mounting points for secure installation
- Optimized for heavy-duty ground engagement
