

Excavator Bucket Tooth for Abrasive Conditions

This excavator bucket tooth is designed for abrasive environments. It is manufactured from high-quality alloy steel for resistance to wear, impact, and breakage.

Product Overview

High-Performance Ground Engaging Tool

This excavator bucket tooth is specifically engineered to withstand highly abrasive conditions, ensuring prolonged lifespan and optimal performance in demanding environments. Manufactured from high-quality alloy steel, it offers exceptional resistance to wear, impact, and breakage. Its precise design ensures a secure fit and easy installation, minimizing downtime and maximizing productivity for construction, mining, and earthmoving applications.

Technical Specifications

Material Composition	High-quality alloy steel
Part Number	6Y2553
Ideal Applications	Construction, Mining, Earthmoving, Trenching, Material Handling

Key Features

Performance Benefits

- Engineered for abrasive conditions
- Exceptional wear resistance
- High impact and breakage resistance
- Secure fit design
- Easy installation
