Product Overview

High-Performance Forged Excavator Teeth

These forged excavator teeth are specifically engineered for the DH220-5 machinery model, providing superior durability for demanding construction environments. Available in multiple configurations including standard, rock chisel (RC), and tiger long (TL) designs, they are built to handle various digging and excavation applications. Precision-engineered for a secure fit, these components are designed to offer extended wear life and optimal performance on the job site.

Technical Specifications

Available Configurations

- Standard Tooth
- Rock Chisel (RC) Tooth
- Tiger Long (TL) Tooth

Compatible Machine Models

DH220-5

Part Numbers

2713-1217, 2713-1217RC

Quality & Standards

Quality Certifications

ISO 9001:2008
