

Excavator Fuel Pump Assembly with Aluminum Housing

This fuel pump assembly is designed for use in excavators. It features a silver aluminum housing and ensures the delivery of fuel from the fuel tank to the engine.

Product Overview

High-Performance Fuel Delivery

This excavator fuel pump assembly is engineered for reliable diesel fuel delivery, ensuring consistent engine performance under demanding operational conditions. Featuring a durable aluminum housing, the unit is designed to withstand the rigors of heavy machinery environments. It integrates seamlessly with existing electrical systems via standardized connectors, making it an essential component for maintaining optimal fuel flow from the tank to the engine.

Technical Specifications

Housing Material	Aluminum
Pump Type	Electric Diesel Pump

Compatibility

Application	Excavator
Engine Compatibility	Perkins
