

Excavator Hydraulic Oil Pipe

This cast iron oil pipe is designed for excavator hydraulic systems. It features a flanged connection for secure mounting and a ribbed hose connection for reliable fluid transfer.

Product Overview

High-Performance Hydraulic Oil Pipe

This cast iron excavator oil pipe is specifically engineered for demanding hydraulic systems in heavy machinery. It features a robust flanged connection for secure mounting and a ribbed hose barb end to ensure reliable fluid transfer under pressure. Designed for high-pressure applications, it offers exceptional resistance to wear and corrosion in harsh construction environments.

Technical Specifications

Model Identification

3003

Material

Cast Iron

Design Features

Connection Interfaces

- Flanged connection with multiple bolt holes
- Ribbed hose barb end
- Secondary port for auxiliary connections

Performance & Durability

Key Benefits

High-Pressure Resistant, Wear Resistant, Corrosion Resistant, Secure Mounting

Applications

Suitable Machinery

Excavator Hydraulic Systems

Operating Environment

Demanding construction environments and heavy machinery oil transfer
