

Excavator Hydraulic System Parts

These hydraulic parts are designed for use in excavators. They enable efficient operation of digging, material handling, and other excavation tasks.

Overview

High-Performance Hydraulic Excavator System

This heavy-duty hydraulic excavator is engineered for demanding excavation, digging, and material handling applications. Built with a robust chassis and a high-efficiency hydraulic system, it ensures reliable performance in construction, mining, and infrastructure projects. The design prioritizes operator comfort and visibility with a spacious cabin, facilitating productivity on complex job sites.

Technical Specifications

Key Features

- Robust chassis construction
- Powerful hydraulic system
- High-capacity digging bucket
- Spacious operator cabin

Model Identifier	FR170-2
Primary Applications	Excavation, Digging, Material Handling, Construction, Mining, Infrastructure
