

Excavator Hydraulic Vibratory Plate Compactor Attachment

Hydraulic vibratory plate compactor attachment designed for excavators. It is used for soil compaction in trenches and other confined areas.

Overview

High-Performance Compaction

This hydraulic vibratory plate compactor attachment is engineered specifically for use with excavators, providing reliable soil compaction in trenches and confined areas. Its robust design ensures durability under demanding job site conditions, making it an essential tool for road construction, pipeline installation, and general site preparation. The hydraulic operation allows for efficient integration with existing machinery, delivering consistent compaction performance.

Technical Specifications

Key Features

- Hydraulic operation
- Durable construction
- Efficient compaction performance
- Suitable for confined areas

Operation Type	Hydraulic
Primary Applications	Road Construction, Pipeline Installation, Soil Compaction, Site Preparation
Equipment Compatibility	Excavator Attachment
