

Excavator Slewing Ring Bearing for JCB 220

This slewing bearing enables excavator movement and serves as a core component for ensuring durability and flexibility. It is an essential spare part for smooth and controlled rotation of the excavator's upper structure.

Product Overview

Precision Engineering for Heavy Equipment

This slewing ring bearing is a core component designed for optimal excavator rotation performance. Engineered for both durability and flexibility, it ensures smooth operation of the upper structure under heavy loads. The component meets rigorous standards to provide reliable stability and an extended service life in demanding construction environments.

Technical Details

Compatible Machinery	JCB 220
Primary Function	Excavator upper structure rotation

Quality Standards

Quality Compliance
OEM Specification Met • Heavy-Duty Grade
