

Excavator Track Roller

This track roller is designed for use in construction machinery, specifically excavators. It provides essential support and enables smooth operation of tracked vehicles.

Product Overview

Precision Undercarriage Performance

These track rollers are engineered for crawler-type excavators and bulldozers ranging from 0.8T to 100T. Utilizing advanced warm forging and heat treatment techniques, the rollers achieve superior wear resistance and maximum load capacity. The design incorporates a reliable double-cone sealing system, ensuring long service life and consistent performance in demanding construction environments.

Technical Specifications

Compatible Machine Weight

0.8 T

Minimum Weight

100 T

Maximum Weight

Manufacturing Processes

Warm Forging, Differential Quenching, Through Quenching, Casting, Welding, Precision Processing

Sealing Technology

Double-cone sealing

Lubrication

Lifetime lubrication

Compatibility

Machinery Types

- Excavators
- Bulldozers
