

Excavators and Wheel Loaders

These are heavy machines used at construction sites. Excavators feature articulated arms and digging buckets, while wheel loaders are equipped with large front-end buckets for material handling.

Overview

Versatile Construction Machinery

This collection features a comprehensive range of construction machinery, specifically excavators and wheel loaders designed for diverse site requirements. These machines are engineered for heavy-duty material handling, excavation, and earthmoving tasks. With features like articulated arms and high-capacity front-end buckets, they provide the necessary power and precision for large-scale construction projects.

Machinery Types

Equipment Categories	Excavator, Wheel Loader
----------------------	-------------------------

Operational Features

Operator Safety	Yes
Cab Configuration	Enclosed cab for operator protection

Technical Specifications

Loader Bucket Capacity

3 m³ Bucket Capacity

Available Model Variants

- ZL40F
- PC 200
