

Experimental Analysis Instrument with Integrated Massage

This experimental analytical instrument is designed for detailed analysis. It features a basin with integrated massage elements and a water drainage system.

Overview

Experimental Analysis Instrument

This specialized experimental analytical instrument is engineered for detailed laboratory and research applications. It features an integrated basin system equipped with massage elements to support specific experimental requirements. Designed for mobility and precision, the unit includes a convenient transport handle and a dedicated water drainage system to ensure controlled conditions during analytical procedures.

Design & Build

Key Features

- Integrated massage elements
- Built-in water drainage system
- Portable design with transport handle
- Laboratory-grade construction

Application Area

Laboratory Research, Experimental Analysis, Controlled Testing
