

Explosion-Proof Core Drilling Machine for Tunnel Construction

This explosion-proof drilling machine is specially developed for drilling in coal mining tunnels. It is suitable for drilling with tungsten carbide bits for tunnel construction.

Product Overview

Industrial Performance in Hazardous Environments

The DSHJ-650 is a robust explosion-proof drilling machine engineered specifically for demanding tunnel construction and industrial applications. It features a powerful motor and rigid frame construction designed to minimize vibration, ensuring high precision and reliable performance. Equipped with advanced safety features to prevent ignition, this machine is suitable for drilling across a variety of materials, including metal, plastic, and composites.

Technical Specifications

Safety Certification

Explosion-Proof • MA Certified

Key Design Features

- Rigid frame for vibration reduction
- Precision control system
- Explosion-proof motor housing
- Easy maintenance access

Model Number	DSHJ-650
Compatible Materials	Metal, Plastic, Composite Materials
