

External Turning Tool Holder

This external turning tool holder is designed for right-hand cutting operations. It features a clamping mechanism for secure insert retention and is suitable for various turning applications on a lathe.

Product Overview

Professional Turning Tool Holder

This external turning tool holder is engineered for precise machining and right-hand cutting operations on a lathe. Designed to accommodate triangular inserts, it features a robust clamping mechanism that ensures secure retention during high-speed turning. This tool is an essential component for diverse industrial turning applications, providing stability and reliability.

Technical Specifications

Cutting Direction

Right-hand

Model Identifier

MDJNR2525-M1504

Compatible Insert Shape

Triangular

Clamping System

Mechanical Clamp

Applications

Suitable Applications

External Turning, Lathe Machining
