

# External Vacuum Sealing Machine

This automatic external packing machine is designed for vacuum sealing various products. It features digital displays for precise control and monitoring of the vacuum process.

## ADDITIONAL IMAGES

## Product Overview

### Professional External Vacuum Sealing Solution

The external vacuum sealing machine is a compact, high-efficiency solution designed for horizontal vacuum packaging. Featuring an adjustable stainless steel working platen, this machine accommodates objects of varying thicknesses, making it ideal for diverse industrial needs. With microcomputer control and both manual and foot-switch operation, it offers precise, user-friendly control for consistent packaging results.

## Technical Specifications

### Safety Features

Emergency Stop • Double Protection • Automatic Alarm

### Control System

Microcomputer board control

### Operation Modes

Manual, Automatic, Foot Switch

### Construction Material

Stainless steel

## Application & Usage

### Suitable Applications

- Semiconductor & Wafer Packaging
- Electronic Components (IC)
- Metal Processing Parts
- Textiles & Cotton Wool Products

### Key Benefits

- Reduced packaging volume
- Impact resistance
- Freshness preservation
- Original state maintenance

## Optional Configurations

### Available Options

- Inflation function
- Double-sided heating
