

Eye and Bow Swivel

This swivel is designed with an eye at one end and a bow at the other for secure connections in lifting applications. Its 360-degree rotation prevents twisting of ropes and cables.

Product Overview

Professional Grade Swivel Hardware

The U.S Type Eye and Bow Swivel is a high-performance mechanical component engineered for reliable load handling in lifting and rigging applications. Featuring a robust eye and bow configuration, it enables smooth 360-degree rotation to prevent the dangerous twisting of chains, cables, and ropes. Built from high-strength steel, this durable component is designed to withstand the rigors of construction, marine, and heavy industrial environments.

Technical Specifications

Primary Benefits

- Prevents twisting and tangling of cables
- Durable construction for longevity
- Corrosion and wear resistance
- Secure eye-and-bow connection

Material	High-strength steel
Rotation	360-degree
Recommended Applications	Lifting, Rigging, Construction, Marine, Industrial
