

Eye Coupling Nut

This coupling nut features a cylindrical barrel for insertion and a flattened eyelet with a central hole for attachment. It is constructed from durable materials to withstand mechanical stress and environmental factors.

Product Overview

Reliable Eye Coupling Nut

The Eye Coupling Nut is a high-performance fastening component engineered for secure and reliable connections in demanding environments. Featuring a robust cylindrical barrel for insertion and a precision-engineered eyelet, it allows for seamless attachment to various mechanical components. Built to withstand significant mechanical stress and environmental factors, this nut ensures long-lasting performance and structural integrity.

Design & Construction

Design Features

- Cylindrical barrel for secure insertion
- Flattened eyelet design
- Central hole for attachment
- High-strength metallic construction

Durability

Mechanical Stress Resistant, Environmental Resistant, Durable Metallic
