

F-1300 Reciprocating Mud Pump

The F-1300 mud pump is a high-performance reciprocating pump designed for demanding drilling operations. It is capable of delivering high flow rates and pressures, making it suitable for a wide range of drilling applications.

Product Overview

High-Performance Drilling Solution

The F-1300 Reciprocating Mud Pump is a robust, high-performance unit engineered for demanding drilling operations. It features a forged steel fluid end for superior durability and high-pressure resistance, alongside a modular design that simplifies maintenance. With efficient power transmission and high flow rate capabilities, this pump is optimized for a wide range of professional drilling applications.

Technical Features

Key Construction Features

- Forged steel fluid end
- Gear reduction system
- Modular design for maintenance
- High-pressure resistance
