

Face Recognition and IC Card Access Control System

This access control system combines face recognition and IC card technology. It accurately identifies cardholders, preventing identity theft and offering supervisory capabilities.

Product Overview

Advanced Access Control Solution

This face recognition and IC card access control system offers a high-reliability, non-contact solution for secure facility management. Designed to prevent identity theft and unauthorized access, it eliminates the need for physical punch cards or manual logs. The unit features a standard interface, allowing for seamless integration with various automatic doors, gates, and electronic locks.

System Capabilities

Key Features

- Non-contact operation
- High reliability
- Identity theft prevention
- Eliminates alternative punching

Verification Methods

Face Recognition, IC Card

Connectivity

Compatible Hardware

- Automatic doors
- Security gates
- Electronic locks

Interface

Standard interface for universal connectivity
