

Fan Motor and Component Set

This set includes a vertical motor assembly designed for efficient air movement in demanding environments. It also contains nylon insert lock nuts and a precision-engineered metal component for fan systems.

ADDITIONAL IMAGES

Product Overview

Industrial High-Volume Ventilation

This large-scale industrial fan system is engineered for high-efficiency ventilation in spacious environments. Utilizing advanced motor technology and precision-machined structural components, it offers significant energy savings while maintaining robust performance. The system is designed for reliable operation in demanding settings, providing extensive air circulation coverage.

Performance Metrics

Airflow Volume

13000 m³/min

Airflow

Effective Coverage

1000 m²

Recommended Installation Height

10-12 meters

Technical Specifications

Motor Power	1.5 kW
Input Voltage	380V (Customizable)
Standard Blade Diameter	7.3 m
Minimum Installation Space	1.1 m

Materials and Construction

Blade Material	Aluminum magnesium alloy
Structural Material	6063 Aluminum profile
Manufacturing Process	CNC Machining

Control Systems

Control System	Frequency converter
