

Fence Board Molding Machine

This specialized machine is designed for molding fence boards, ensuring consistent dimensions and profiles. It features a series of rollers and shaping tools to gradually form the desired shape of the fence board from raw material.

Overview

Industrial Fence Board Molding Solution

This high-performance fence board molding machine is engineered for precision and durability in continuous production environments. Featuring a robust 15 KW motor and specialized roller systems, it streamlines the shaping process to ensure consistent board profiles. With its durable construction and adjustable settings, this machine provides a reliable solution for manufacturers looking to improve efficiency and maintain high quality standards in fence board production.

Technical Specifications

Motor Power

15 KW

Motor Power

Roller Diameter

100 mm

Cutting Precision

± 2 mm / 10 m

Construction & Materials

Spindle Material

No. 45 steel

Chain Specification

20 A
