

Fiber Optic Delay Line

This fiber optic delay line features a central module connected to coiled fiber optic cables. It introduces a specific time delay in optical signals for signal processing and telecommunications.

Product Overview

High-Precision Fiber Optic Delay Line

This professional-grade fiber optic delay line is engineered to introduce highly accurate time delays in optical signal transmission. Featuring a robust central module integrated with dual coiled fiber optic cables, the unit ensures optimal signal integrity and minimal loss. It is an essential component for high-performance applications in telecommunications, advanced instrumentation, and precise signal processing systems.

Technical Specifications

Primary Applications

- Telecommunications
- Signal Processing
- Instrumentation

Cable Type	Coiled Fiber Optic
Jacket Color	Yellow
Connector Compatibility	FC
