

Fiberglass Anti-Corrosion Pipe

Fiberglass anti-corrosion pipes are designed with an outer cement layer for enhanced protection. These pipes are suitable for transporting water, sewage, and industrial effluent.

Product Overview

High-Performance Industrial Piping

These large-diameter fiber reinforced plastic (FRP) pipes are engineered for demanding industrial environments. Featuring a specialized anti-corrosion coating and a robust outer layer, they offer exceptional resistance to chemical degradation and environmental stress. The smooth inner lining is designed to ensure optimal flow efficiency, making them an ideal solution for water transport, sewage systems, and industrial effluent disposal.

Technical Specifications

Key Features

- Anti-corrosion exterior
- High strength construction
- Smooth inner lining
- Chemical degradation resistance

Material Composition

Fiberglass, Reinforced Plastic, Cement Coating

Application Suitability

Primary Applications

Water Transport • Sewage Systems • Industrial Effluent Disposal
