

Fiberglass Composite Hydraulic Rods

Fiberglass composite rods are suitable for hydraulic systems and other industrial applications. The rods are constructed from a composite of fiberglass and resin, ensuring strength and long-lasting performance.

Product Overview

High-Performance Fiberglass Composite Rods

These fiberglass composite hydraulic rods are engineered for demanding industrial applications where strength and durability are paramount. Featuring a smooth, cylindrical surface finish, they are manufactured with precision to ensure consistent performance across various hydraulic systems. The rods are available in a range of diameters and material compositions, providing versatile solutions for diverse engineering requirements.

Physical Properties

Material Composition	Fiberglass, Resin Composite
Surface Finish	Smooth, cylindrical
Manufacturing Method	Precision engineered

Applications

Primary Applications

- Hydraulic Systems
- Industrial Machinery
- Structural Components
