

Film Blowing Machine

This film blowing machine is designed for producing plastic films. It consists of an extruder, die, cooling system, and winding mechanism.

Overview

High-Efficiency Film Blowing Machine

This film blowing machine is engineered for the precise production of high-quality plastic films, essential for packaging and agricultural applications. The system integrates an extruder, die, cooling system, and winding mechanism to transform plastic resin into durable film tubes. With an intuitive control panel, operators can finely adjust temperature, speed, and air pressure to ensure consistent output quality.

Technical Specifications

Model	SJ-45
Screw Diameter	50 mm

Key Features

Core Components

- Extruder unit
- Die head
- Cooling system
- Winding mechanism
- Control panel

Applications

Typical Applications	Packaging Materials, Agricultural Films, Plastic Film Production
