

Film Chain Camera System for Broadcasting

This film chain camera system converts film images into video signals for broadcasting. It's designed for professional broadcasting environments, supporting various film formats and frame rates.

System Overview

Professional Broadcast Conversion System

This film chain camera system is specifically engineered for professional radio and television broadcasting environments. It provides a robust solution for the seamless conversion of film media into high-quality video signals. Designed for reliability, it integrates a projector and camera assembly to ensure precision in real-time transmission workflows.

Model Identifier

IK-2100

Technical Features

Included Components

- Film Projector
- Broadcast Camera
- Electronic Control Unit

Primary Applications

Radio Broadcasting, Television Broadcasting, Film to Video Conversion

Performance Metrics

Operational Capabilities

- Real-time conversion
- Variable film format support
- Adjustable frame rate synchronization
