

Film Coating Thickness Gauge

This precision instrument is designed for non-destructive measurement of film and coating thickness on various substrates. The gauge utilizes advanced technology to provide accurate readings in both metric and imperial units.

Overview

Precision Measurement Technology

This precision instrument is designed for the non-destructive measurement of film and coating thickness on a variety of substrates. Utilizing advanced measurement technology, it provides highly accurate readings in both metric and imperial units. Its ergonomic design ensures comfortable handling, while the clear LCD display allows for easy viewing of measurements, making it an essential tool for quality control, manufacturing, and research applications.

Key Features

Ideal Applications

- Quality Control
- Manufacturing
- Research & Development

Measurement Capabilities

Non-destructive, Metric Units, Imperial Units

Design & Usability

Design Highlights

Ergonomic Design • Clear LCD Display
