Overview

Advanced Security Patrol Management

This fingerprint patrol scanner is designed to modernize security management by eliminating 'buddy punching' and ensuring accurate patrol tracking. It features biometric authentication, intelligent voice and vibration prompts, and a ruggedized build suitable for demanding environments. With flexible software scheduling and dual-tag reading capabilities, it provides a comprehensive solution for professional security teams.

Technical Specifications

Durable polycarbonate housing designed for wide temperature ranges.

Key Technical Metrics

2400 MHz

Frequency Start

2483.5 MHz

Frequency End

-40 °C

Min Temperature

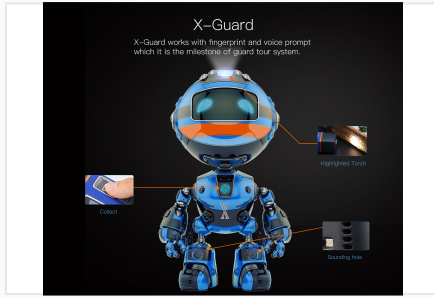

85 °C

Max Temperature

Construction Material

Polycarbonate

Features

Equipped with a high-intensity flashlight and clear audio prompts for field use.

Intuitive interface with voice and vibration feedback for direct interaction.

Biometric authentication prevents unauthorized patrol tricking and buddy punching.

User Feedback Mechanisms

Voice Prompt • Vibration Prompt

Authentication Methods

Fingerprint, RFID (125kHz), Bluetooth

Integrated Tools

High-intensity flashlight/torch
