

Fire Fighting Pressure Pump System

This fire fighting pressure pump system is designed for reliable water supply in fire suppression. It maintains constant pressure and increases water flow during fire emergencies, with safety and monitoring features.

Product Overview

Fire Fighting Constant Pressure System

The WXF series is a specialized water supply equipment designed specifically for fire fighting applications. The system ensures constant pressure and reliable performance, providing increased water flow essential for emergency fire suppression. Built with a robust vertical pressure tank and a centralized control panel, it offers a secure solution for building safety and fire protection requirements.

Technical Features

System Series	WXF Series
Primary Application	Fire Fighting, Constant Pressure, Emergency Water Supply

System Components

Key Components

- Vertical pressure tank
- Control panel
- Multiple pump units
- Common base mount
