

Fire Hose Circular Loom

This circular loom is designed for weaving fire hoses. The machinery produces high-strength, circular woven fabrics used in fire hoses.

Overview

High-Performance Circular Loom

This industrial-grade circular loom is engineered specifically for the production of high-strength, seamless tubular fabrics essential for fire hose manufacturing. Utilizing advanced circular weaving techniques, it ensures superior durability and consistent resistance to high pressure. Designed for versatility, the machine supports a wide range of yarn types and hose diameters, making it a reliable solution for demanding production environments.

Technical Specifications

Weaving Method	Circular Weaving
Fabric Structure	Seamless Tubular

Key Features

Key Features

- Robust heavy-duty frame
- Precision yarn feeding mechanisms
- Automated tension control
- Versatile yarn compatibility
- Adjustable hose diameter settings

Operational Safety

Safety & Controls	Safety Interlocks, User-Friendly Interface, Automated Monitoring
