

Fire Hose Circular Loom

Circular loom designed for weaving fire hoses. It is engineered for continuous operation and high-quality hose production.

Overview

Industrial Fire Hose Weaving Solution

This circular loom is a specialized industrial machine engineered specifically for the continuous production of high-quality fire hoses. Featuring a robust blue frame structure, it integrates a precision central weaving mechanism with an efficient yarn feeding and take-up system. Designed for demanding manufacturing environments, this equipment ensures consistent output and structural integrity for critical firefighting equipment.

Technical Specifications

Operational Mode

Continuous Operation

Machine Configuration

Circular Loom

Primary Application

Fire Hose Manufacturing, Industrial Textile Weaving

Key Features

Core Components

- Central weaving mechanism
- Yarn feeding system
- Take-up mechanism
- Reinforced frame structure
