

Fire-Resistant Aluminum Composite Panel

This fire-resistant aluminum composite panel features a layered construction. It consists of a fireproof core sandwiched between two aluminum sheets, providing both fire resistance and structural support.

Product Overview

High-Performance Fire-Resistant ACP

This fire-resistant aluminum composite panel is engineered for demanding architectural applications where safety and structural integrity are paramount. Featuring a robust layered construction, it combines a specialized fire-retardant core with premium metallic outer skins. This design ensures both a high-quality aesthetic finish and reliable performance in environments requiring stringent fire safety standards.

Technical Specifications

Construction	Layered Composite
Core Type	Fire-Resistant Dark Core
Surface Finish	Reflective Metallic

Compliance & Features

Key Features	Fire-Resistant, Structural Integrity, High-Quality Finish
