

Five-Axis Horizontal Machining Center

This five-axis horizontal machining center is designed for precision metal cutting and manufacturing. The machine features a robust frame and a multi-axis cutting head suitable for complex machining tasks.

Overview

High-Precision Five-Axis Horizontal Machining

The MDHW50 is a robust five-axis horizontal machining center engineered for complex, high-precision metal cutting tasks. Designed with a rigid industrial frame and an advanced multi-axis cutting head, it delivers consistent performance for demanding manufacturing environments. This machine provides the versatility and stability required for intricate component production across various industrial sectors.

Technical Specifications

Axis Configuration

5-Axis

Model

MDHW50

Machine Type

Horizontal Machining Center

Suitable Industries

Precision Manufacturing, Metal Cutting, Industrial Components
