

Flameproof Three-Phase Asynchronous Motor for Winches

This flameproof three-phase asynchronous motor is designed for use in hazardous environments with flammable gases or vapors. The motor provides reliable and efficient power for winch applications and is built to withstand harsh operating conditions.

Product Overview

Industrial Flameproof Power

The YBJ series winch flameproof three-phase asynchronous motor is specifically engineered for high-stakes industrial environments where flammable gases or vapors are present. Featuring a robust flameproof enclosure, this motor ensures maximum safety while delivering consistent, high-efficiency power for demanding winch applications. Built to endure harsh operating conditions, it serves as a reliable solution for various heavy-duty industrial processes requiring explosion-proof certification.

Technical Details

Motor Type	Three-phase asynchronous motor
Primary Application	Winch systems
Enclosure Type	Flameproof
