

Flanged Air Cooler Tube Bundle

This forged flange type air cooler tube bundle is designed for efficient heat transfer in industrial applications. The shell and tube design maximizes surface area for optimal cooling.

Product Overview

Industrial Heat Transfer Solution

This forged flange type air cooler tube bundle is engineered for superior heat transfer efficiency in demanding industrial environments. Featuring a robust shell and tube design, it maximizes surface area to ensure optimal cooling performance for air and various gases. Constructed for durability, the unit includes integrated pressure monitoring and corrosion-resistant materials, making it an ideal choice for chemical processing, power generation, and HVAC applications.

Technical Specifications

Design Type	Shell and Tube
Key Features	Forged Flange, Corrosion Resistant, Pressure Monitoring

Applications

Suitable Industries

- Chemical Processing
- Power Generation
- HVAC Systems
