

Flanged Check Valve for Pipelines

This flanged check valve prevents backflow in pipelines. Its robust metallic construction includes flanged connections for secure, leak-proof installation in industrial settings.

Product Overview

Industrial Flow Control Solution

This flanged check valve is engineered specifically for preventing backflow in critical pipeline systems. Its robust metallic construction ensures durability and long-term reliability in demanding industrial environments. Designed with standard flanged connections, it provides a secure, leak-proof installation essential for maintaining consistent one-way flow control.

Technical Specifications

Primary Function

Backflow Prevention • One-Way Flow Control

Installation Features

- Secure flanged connections
- Leak-proof design
- Industrial-grade durability

Connection Type	Flanged
Construction Material	Robust Metallic
