

Flanged Foot Valve

This foot valve prevents backflow in pumping systems. It is applicable for use in oil fields, chemical industries, coal mines, and environmental protection.

Product Overview

Professional Flanged Foot Valve

This flanged foot valve is engineered for reliable performance in pumping systems, specifically designed to prevent backflow and maintain pump prime. Featuring a robust flanged end connection, it ensures a secure, leak-proof installation suitable for demanding industrial applications. The valve also acts as a strainer, preventing debris from entering the pumping system and protecting critical downstream equipment.

Technical Specifications

Nominal Diameter (DN)	200 mm
Pressure Rating	PN16
Class Rating	Class 150 / 150lb

Construction & Materials

Connection Type

Flange End • RF End

Material Composition

Stainless Steel, WCB

Standards & Compliance

Standards

- API Standard
