

Flanged Globe Valve - API Standard

This globe valve is designed with flanged connections that meet API standards. It is suitable for use in oil fields, the chemical industry, coal mines, and for environmental protection applications.

Product Overview

API Standard Flanged Globe Valve

This API standard stainless steel globe valve is engineered for precise flow control in demanding industrial environments. Featuring a robust construction and standardized flanged connections, it ensures reliable performance and durability. Designed for manual operation via a handwheel, this valve is suitable for a wide range of fluid applications.
