

# Flanged Immersion Heating Element

Immersion heating element features a square flange for secure mounting. Dual looped heating rods ensure efficient heat transfer.

## Overview

### High-Efficiency Flanged Immersion Heating Element

This flanged immersion heating element is engineered for reliable and efficient thermal transfer in liquid heating applications. Designed with a robust square flange, it ensures secure mounting and long-term stability in water heaters and industrial tanks. The dual looped heating rod configuration maximizes surface area for rapid heating, while the durable metal construction offers excellent resistance to corrosion and wear.

## Design & Construction

Mounting Style	Square Flange
Element Configuration	Dual Looped Rods
Material Features	Corrosion Resistant, Durable Metal Construction

## Applications

### Primary Applications

- Water Heaters
- Industrial Liquid Heating
- Tank Heating Systems
