Flat bar finishing machine

Overview

Precision Flat Bar Finishing

This heavy-duty industrial finishing machine is engineered for the precision processing of flat steel bars. It utilizes a multi-station configuration equipped with specialized rollers and guides to ensure superior straightening and shaping accuracy. Designed for modularity, it allows for customization to meet specific production requirements while significantly enhancing surface finish and dimensional quality.

Technical Capabilities

Processing Features

- Precision surface finishing
- High-accuracy straightening
- Multi-station configuration
- Modular design for customization

Control System

Adjustable Speed, Adjustable Pressure, Manual Control Panel

Construction

Build Quality

Heavy-duty • Industrial Grade • Robust Construction
