

Flat Film Drawing Unit

The flat film drawing unit is designed for producing flat films through multiple stages. It includes material feeding, extrusion, drawing, and winding mechanisms to ensure consistent film quality and high throughput.

Overview

High-Speed Flat Film Drawing Unit

This high-speed flat film drawing unit is engineered for the efficient, large-scale production of flat films. The system integrates a comprehensive workflow, starting from raw material input through to the final winding of finished rolls. Designed for consistent performance, it features precise temperature control and advanced tension management to ensure uniform film quality and thickness throughout the entire production process.

Technical Capabilities

Key Features

- Integrated material feeding system
- High-precision extrusion unit
- Advanced drawing section
- Automated winding mechanism
- Precise temperature control
- Tension management system

Performance Metrics

1 High

Production Throughput

Application

Application Scope

Large-scale production, Film manufacturing, Packaging material processing
