

Flattop Tower Crane PT5610

This self-elevating top slewing tower crane is designed for construction sites. It features a long jib, a robust structure, and a high lifting capacity.

Overview

High-Performance Flattop Tower Crane

The PT5610 flattop tower crane is engineered for demanding construction environments, offering a robust structure and reliable performance. With a focus on efficiency, this model provides a significant maximum load capacity and an extensive operating radius to handle diverse lifting requirements on site. Its modular design ensures that assembly and disassembly are streamlined for project flexibility.
