

Float Glass Production Line

This turnkey project provides a complete float glass production line, including design, equipment, and training. The line incorporates advanced technologies for precise temperature control, efficient melting, and consistent thickness.

Overview

Turnkey Float Glass Production Solution

This comprehensive float glass production line offers a complete manufacturing solution, encompassing everything from initial design and equipment supply to installation, commissioning, and operator training. Engineered for high-quality output, the system integrates advanced technologies for precise temperature control, efficient melting, and consistent glass thickness. Designed with sustainability in mind, the line features optimized energy efficiency and advanced emission control systems to ensure environmental compliance.

Technical Capabilities

Performance Metrics

1 Main

Glass Melting Furnace

1 Main

Annealing Lehr

Included Systems

- Glass melting furnace
- Annealing Lehr
- Cutting and handling systems
- Auxiliary equipment

Services

Project Scope

Design, Equipment Supply, Installation, Commissioning, Training

Compliance

Environmental Features

Energy Efficient • Emission Control
