

Floating Aeration Pump for Aquaculture

This floating pump is designed for efficient water transfer in agricultural settings. Its floating design allows it to operate in shallow or fluctuating water levels, making it suitable for irrigation, drainage, and other water management applications.

Product Overview

High-Efficiency Floating Aeration Pump

This floating aeration pump is engineered for reliable water transfer and oxygenation in aquaculture, irrigation, and drainage applications. Its buoyant design ensures consistent performance even in fluctuating water levels, eliminating the need for fixed mounting structures. Built for durability and ease of use, it features a robust motor and optimized impeller system to maintain high flow rates while minimizing maintenance needs.

Technical Specifications

Rated Power	2200 W
Phase	3-phase
Voltage	220 V

Performance Metrics

Key Performance Indicators

55 CBM/Hour
Max Capacity

6 m
Max Head

Physical Attributes

Outlet Diameter	4 inch
Net Weight	15 kg

Features & Compatibility

Key Design Features

- Floating design for fluctuating water levels
- Corrosion-resistant construction
- Expandable pipe connectivity
- Clog-resistant impeller system

Suitable Applications

Aquaculture, Irrigation, Drainage, Water Management
