

Floating and Sinking Fish Feed Pellet Machine

This machine produces both floating and sinking feed pellets for diverse animal diets. It is suitable for creating poultry, pet, aquaculture, and fishery feeds, enhancing protein ratios and digestibility.

Product Overview

Professional Fish Feed Processing Solution

This advanced pellet machine is designed to produce both floating and sinking feed for a wide range of livestock, pets, and aquatic species. By utilizing an integrated process of preparation, extrusion, and drying, it significantly improves the protein ratio and digestibility of raw materials. Equipped with a PLC control system and high-durability stainless steel construction, it ensures consistent production for small and large-scale facilities.

Application

Suitable Species

Poultry, Dogs, Cats, Fish, Shrimp, Crabs, Sheep, Cattle

Technical Features

System Components

- High-efficiency extruder
- Multi-layer dryer
- Automated packaging system
- PLC control system

Construction Material

Stainless steel

Production Capabilities

Operational Highlights

2 modes

Feed Types
