

Floating Dry Dock with Crane

This floating dock is equipped with heavy-lift cranes to facilitate ship repair and maintenance. The pontoon structure provides buoyancy and stability, while ballast tanks allow for controlled submersion and elevation during dry docking.

Overview

Floating Dry Dock with Crane

This floating dry dock is a specialized marine infrastructure solution designed for efficient ship repair and maintenance. Featuring a robust pontoon structure, it provides exceptional buoyancy and stability for handling large vessels. Integrated heavy-lift cranes are strategically positioned along the dock's length, facilitating the precise maneuvering of ship components during complex repair operations.

Technical Specifications

Operational Features

- Integrated heavy-lift cranes
- Ballast tank system for submersion and elevation
- Dry docking capability
- Utility support systems

Structure Type	Pontoon-based floating dock
Primary Application	Ship Repair, Marine Maintenance, Vessel Dry Docking
