Floating Water Pump

This floating water pump is designed for efficient drainage and irrigation. Its floating design allows it to move freely across the water surface, preventing sediment intake and maintaining clean water flow.

Product Overview

Versatile Floating Water Pump

This floating submersible water pump is engineered for efficient water transfer, irrigation, and aeration applications. Designed to operate directly from the water surface, it prevents sediment intake while ensuring consistent flow for agricultural or aquaculture needs. Its robust construction and 750W motor provide a reliable solution for continuous duty in rivers, ponds, and irrigation channels.

Technical Specifications

Rated Power	750 W
Power Supply	3-Phase, 220V
Outlet Diameter	3 inch

Performance Metrics

Key Performance Indicators

7 m	25 CBM/Hour
Max Head	Max Capacity

Physical Characteristics

Net Weight	12 kg

Applications

Primary Applications	Fishpond Aeration, River Irrigation, Agricultural Water Transfer
